

RETINAL EXAMINATION CONSENT

At Tree City Eyecare, we pride ourselves in providing the absolute best eye care by utilizing the latest advancements in medical technology. Part of a complete eye examination involves a wide-angle view of the internal structures of the eye. Evaluating the internal health of your eye allows us to look for early signs of macular degeneration, glaucoma, retinal detachment, diabetic damage, changes due to high blood pressure, and more. Many of these conditions can be detected *before* any effects to vision are noted, so **it is our policy that each eye exam includes a close examination of the inside of your eye.** Historically, the only way to obtain a wide-angle view of these critical structures was with dilation of the pupil.

We are now pleased to offer the Clarus Retinal Scan developed by Zeiss, the worldwide leader in optics. This scan produces a stunning image of the inside of your eye, showing details that are only otherwise viewable with dilation. **Dr. Dixon recommends the Clarus Retinal Scan as part of your yearly eye examination.**

BENEFITS of the scan include:

- *Extensive view of the retina and other internal structures without dilation*
- *Year-to-year tracking of subtle changes in eye health*
- *Confidence that you are receiving the best in eye care, utilizing the latest technology*
- *Detailed screening for eye diseases like macular degeneration, retinal breaks, glaucoma, undiagnosed or uncontrolled diabetes, and more*

The co-pay for this scan is only **\$39**. While the Clarus Retinal Scan is recommended yearly, there may be times your doctor will also recommend a dilated exam. Your overall eye health is of the utmost importance to us, and we will do all we can to ensure that health.

Yes, I would like the wide-field retinal scan I would like to discuss further
 I prefer dilation only at this time
